

What you're receiving & what we need from you

Prepared for: Client / IT Administrator | A one-page brief to read before opening the installer

FlowAccel is a workflow management application that runs **entirely on your own server** — your forms, approvals, signatures and data never leave your premises. You'll receive two items: (1) the Windows installer, and (2) a short PDF asking your IT team for a few details.

What your IT team needs to do — in order

1 Prepare a Windows server

- Windows 10 / Server 2016 or newer
- 10 GB free disk space on C:
- Administrator access
- A fixed internal IP address
- **No internet needed** — everything's bundled

2 Fill the Azure AD info sheet

- Register FlowAccel inside Microsoft Entra ID
- Send us App ID, Tenant ID, Client Secret
- Lets staff sign in with Microsoft 365
- Client Secret must be shared securely

3 Install 7-Zip on the server

- Free utility — 30 seconds to install
- From <https://www.7-zip.org>
- Needed to extract the installer parts

4 Run the installer

- Download 5 parts + open `.7z.001` with 7-Zip
- Right-click the `.exe` → Run as Administrator
- Walk through 6 wizard pages (IP, passwords, cert)
- Wait **10–15 minutes** for install to finish

What happens after installation

Auto-starts with the server

Runs as a Windows service.
Survives reboots without manual intervention.

Access on your network

Users open `https://<server-ip>/` from any browser inside your LAN.

Local database

All workflow data stored in a PostgreSQL database on the same server.

Three things to keep in mind

- **All on-premises, no cloud dependency.** Forms, approvals, and signatures stay on your hardware.
- **One-time setup, then hands-off.** The installer is idempotent — safe to re-run if anything goes wrong.
- **Microsoft sign-in is optional but recommended.** Saves managing a separate password for each user.

Security note: The Client Secret (from the Azure AD form) and any certificate private key are highly sensitive. Send via a password-manager share, encrypted file, or secure upload link — **never plain email**. The App ID and Tenant ID are not secret.

Before we kick off — please confirm:

- ☐ Which Windows server you'll install on
- ☐ Completed Azure AD information sheet returned
- ☐ 7-Zip installed on the target server

☐ A 30-minute window booked for your IT person to run the wizard (we'll be on-call)
