

Information Required — Microsoft Azure AD (Entra ID) OAuth

Prepared for: Client / IT Administrator **Date:** 18 May 2026

Action: Provide the items below & return this sheet

To connect **FlowAccel** to your Microsoft 365 / Azure environment via **Azure AD OAuth** (Microsoft Entra ID), we require the following details from you. Please provide each item in the table and return this document to us.

1. Azure AD / Entra ID Credentials Required

#	Item we require	Where to find it in the Azure portal	Your value
1	Application (Client) ID Unique ID of the registered app	App registration → Overview	
2	Directory (Tenant) ID Unique ID of your Azure directory	App registration → Overview	
3	Client Secret — Value The generated secret string (send securely)	Certificates & secrets → New client secret	
4	Client Secret — Expiry date So we can plan renewal before it lapses	Certificates & secrets	
5	Redirect URI registered Must be the HTTPS URL supplied by FlowAccel	Authentication → Web platform	
6	Supported account type Single-tenant is recommended	Set during app registration	Single tenant / other

Quick note on the application

The app should be registered under [Microsoft Entra ID → App registrations → New registration](#) with the name `Flowacce1`. The redirect URI must use `https://` — the exact URL is provided by FlowAccel.

2. SSL / TLS Certificate Required

Since all OAuth traffic must run over `https://`, a valid SSL/TLS certificate must be in place. Please provide the following certificate details.

#	Item we require	Notes	Your value
7	Domain name (Common Name)	The domain the certificate is issued for	
8	Issuing Certificate Authority	e.g. DigiCert, Sectigo, Let's Encrypt	
9	Valid from / Valid to	Certificate must be currently valid (not expired)	
10	Auto-renewal enabled?	Confirms the certificate will not silently expire	<i>Yes / No</i>

Important — how to send these securely

The **Client Secret** and the certificate **private key** are highly sensitive. Do **not** send them in a plain email. Use a secure upload link, password-manager share, or encrypted file. The Client ID and Tenant ID are not secret and may be shared normally.

3. Server Software Requirement

The following software must be installed on your server / system for the integration to run correctly. Please install it and confirm below.

#	Software required	Notes	Confirmation
11	7-Zip File archiver / extraction utility	Must be installed on the server where the integration runs. Download from the official site: <code>https://www.7-zip.org</code>	<i>Installed: Yes / No</i> — <i>Version: ____</i>

Note on 7-Zip

Install 7-Zip on the **same server / system** that hosts the integration so that FlowAccel can compress and extract files as part of its processing. Please confirm the installed version in the table above.

4. Your Contact Details

Completed by (name)	
Role / job title	
Email address	
Date completed	

Checklist before returning this sheet

- ☐ Items 1–6 (Azure credentials) filled ☐ Items 7–10 (SSL certificate) filled ☐ Item 11 — 7-Zip installed on server ☐ Client Secret sent via a secure channel ☐ Contact details completed
